Many Americans in Over Their Heads in the Water
Are you really safe in the water?

80% of Americans say they can swim.

But...
less than half of Americans can perform all of the 5 basic skills that could save their life in the water.

1. Step or jump into the water over your head.
2. Return to the surface and float or tread water for one minute.
3. Turn around in a full circle and find an exit.
4. Swim 25 yards to the exit without stopping.
5. Exit from the water. If in a pool, be able to exit without using the ladder.

Only 46% can perform all 5 of these basic water safety skills.

Who can perform all 5 basic water safety skills?

39% of parents of children ages 4–17 say their child can perform them.

57% of men say they can perform them.

33% of African Americans say they can perform them.

36% of women say they can perform them.

The American Red Cross wants to reduce drowning rates across the country, focusing on 50 cities that are at risk.

Every day, an average of 10 people die in the U.S. from unintentional drowning.*

Make sure adults and children can swim; know how to make safe choices in and around the water; and know how to respond to a water emergency. Go to redcross.org to learn more.
