Map It Out!

Draw a water map of the area where you live or somewhere else you spend a lot of time. Include any swim spots or areas for water activities, along with any non-swimming ponds, drainage ditches, fountains or other sources of water. Next, label each water area with the symbol for “swim area” or “water hazard” to mark it. Use this map to help plan how you can be water smart as you move around throughout your day.

My plan to be water smart:
